

CSCI 3355 Software Design and Construction
Lab Document

High-level Purpose statement:	I would like to get a futher feel for the nodejs framework.
Experiment Design:	I'll try to make something that uses the nodejs framework.
Resources Available:	Nodejs documentation is the most important.
Time estimate:	Not long enough. I have been debugging an lalr parser all week for programing langs, and now apparently have to do the final project for OS on my own. What is sleep?
Experiment Notes:	I didnI made some slightly more complicate rest. I brought back the buttons from my spring lab. After figuring out that I have to explicitly read the file as utf-8, I was able to serve a page that update when posted to.
Results:	I now have a page that can be posted to for updating it.
Consequences for the Future:	Nodejs will certainly stay in my bag of tricks.
